ORDERAIDER POS FOR F&B

Order Aider is Adaptable

Order Aider POS Suite is designed to work for food businesses of all sizes — cafeterias, restaurants, food trucks, fast food chains and take away outlets.

Order Aider POS Suite works for all types of orders — walk in, dine in, take away, home delivery and online ordering.

Convenience

We designed Order Aider to the highest standards of usability and user experience so that you and your staff can focus on what matters — delighting your customers and growing your business. Central to Order Aider is its Cloud Web Browser, and we designed it to be elegant and powerful. We use caching and page optimizations so that it fires up instantly.

Fits Your Pocket

We've designed our pricing plans to fit any size of restaurant — tiny to large. Order Aider works on a simple, cost-effective subscription model so you pay monthly or annual as you use it.

Ready To Use

You don't need expensive servers, complex infrastructure or IT guys to set up. Order Aider runs off the cloud, so an internet connection and a browser is all you need to get up and running.

Hardware Independent

Because Order Aider runs on the internet, it is compatible with any device that has a browser, including desktops, laptops, tablets and smartphones. Have your waiters take orders directly on handhelds. No proprietary hardware required.

Managed Service

Order Aider is hosted and managed by us. This means the application resides on servers in the cloud and we take care of everything. Even better, you get free updates and maintenance on the software. Unlike traditional software, there is no painful upgrade path. You get Order Aider updates instantly and hassle-free.

Handheld Order

Order Aider Dine In module comes with a tablet-ready interface.

What's more, unlike traditional POS handhelds, tablet app works on tablet of your choice — Android

Integration With Food Ordering Platforms

Effortlessly manage your menu in multiple online stores from right within Order Aider, receive orders directly into Order Aider, and monitor online sales using Order Aider best-in-class LIVE business dashboard

Scalable

Whether you run a single restaurant or a chain, Order Aider scales at the click of a button. Order Aider works great for single restaurants, but it's been designed from ground up to support multiple outlets.

Control the menu and staff access across all your branches from a single administration.

Franchise Management

All locations within Order Aider are created under a single master administration which lets you control all settings including menu and user access. Meanwhile, each franchisee can have a localized administrator who can access reports and setups related only to their operations.

Offline Mode

'Offline Mode' uses the latest in web technology to punch walk-in orders even when there's no internet available. When Order Aider detects that your internet connection is back, it synchronizes again with the server and retrieves the orders punched offline. So it's business as usual.

Business Insignt

Order Aider dashboard gives you great LIVE insights into every aspect of your business, from top selling menu items to total orders across your outlets to cancelled orders.

SMS & WhatsApp Communication

Order Aider SMS module allows you to maintain instant connectivity with your customers, notifying them at every step of your delivery chain proactively. Not just that, you can also use Order Aider SMS feature to send out carefully-targeted SMS messages to your customers based on reports from your dashboard. Need to send an SMS to customers who haven't ordered from you last month? Now you can, with a single click!
